THE BURLEIGH DODDS SCIENCE DATABASE

Access over 1700 reviews of the latest research in sustainable agriculture for a reduced price!

Gain access to all content published before and during the subscription period, including:

- Advances in Conservation Agriculture - Volume 1: Systems and Science
- Advances in measuring soil health
- Achieving sustainable crop nutrition

As well as any published content from our forthcoming titles, such as:

- Understanding and fostering soil carbon sequestration
- Improving soil health
- Advances in sensor technology for sustainable crop production

How does it work?

We synthesise and curate key research to empower you to implement change at the first stage of the agricultural supply chain and make agriculture more sustainable.

With all the research reviews organised thematically, users can easily find the content they require through utilising our subject-focussed search tool. Users can search by theme, e.g. cultivation systems or crop breeding, or by product, e.g. wheat or apples to ensure they only view the research relevant to them.

The BDS Database is designed to support the needs of all key stakeholders in the agricultural industry - including growers and producers - wishing to achieve a more sustainable agriculture.

Exclusive offer to BSSS members!
